UV-Blocking Black Dispensing Needles

LS-DSP-102

UV-blocking black dispensing needles are for UV-curing and light-sensitive adhesives. Translucent hubs can pass light and start a cure inside the needle, which clogs it; an opaque black hub keeps light off the fluid in the hub.

The range is focused on fine gauges: 22, 25, 27 and 30, with IDs from 0.16 to 0.42 mm. Each has a Type 304 stainless steel cannula on a threaded black polypropylene Luer hub, in 1/4 in. (6.35 mm) and 1/2 in. (12.7 mm) lengths.
